TUFF TORQ OFFERS ECONOMIC ALTERNATIVE TO PUMPS AND WHEEL MOTORS FOR ZERO-TURN MOWERS

MORRISTOWN, TENNESSEE – Tuff Torq Corporation introduces a powerful new efficient drive system called the TZT for the zero-turn market. Capable of speeds up to 12-miles per hour, this unique transaxle combines power, maneuverability and smooth ride. The TZT features a patented dynamic braking system not found on any other zero-turn system, meeting all ANSI standard requirements in place for lawn and garden tractors.

“The TZT is backed by Tuff Torq’s world-class reputation for high quality and superior production standards,” explains Frank Freeman, TTC manager of sales and marketing. “When compared to a conventional pump and wheel motor system, the TZT uses fewer parts that make it easier for OEMs to install and reduces production time. Other benefits include reduced possibility of leaks in the field, trouble-shooting repairs is simplified, noise emission is improved, and warranty and fulfillment are made easier.”

Established in 1989, Tuff Torq Corporation is a leading “on-demand” manufacturer of unique, powerful drive systems for outdoor power equipment, off-road applications and the marine industries. For more information, go to www.tufftorq.com.
